Subject: 1st set of TALC Results
Attachments: 197155 FDA.pdf

Hi John,

Attached, please find the certificate of analysis for the first set of talc samples.

This is just the analytical report... we will work on the case narrative, data package, etc. next week. No asbestos was detected... in fact, no fibrous components were detected at all in this lot. We wanted to get this report out to you so that you could review the format and see if it met your needs.

Please give [REDACTED] a call next week once you and your team have had an opportunity to review the attached.

Also, I wanted to find out how things were going with the following:

- 1) Decision regarding talc products to be obtained from Whittaker, Clark & Davis/Brenntag.
- 2) Decision on how/if to proceed with Ultra Chemical, which is the one company thus far that is reluctant to send samples without us releasing more information regarding our client and our purposes.
- 3) Progress on the product list... we'd really like to get started with the products, even if you'll only be providing a partial list.

I look forward to hearing from you.

Thanks!!
